PCT/GB2003/005670 WO 2004/057962

## Claims

A process for the preparation of a dried particulate blood product the particles whereof comprise anuclear blood cells in a protective agent, said process comprising:

- 15 -

obtaining a blood sample from a mammalian subject; adding an anticoagulant to said sample; concentrating the cells of said sample;

recovering a concentrate containing anuclear blood cells from said sample;

impregnating with said concentrate a particulate comprising a macromolecular protective material;

drying the impregnated particulate at a temperature in the range -20 to +120°C; and, optionally,

packaging the dried particulate in sealed containers.

- A process as claimed in claim wherein said blood sample is obtained from a human subject.
- A process as claimed in any of the preceding claims wherein said macromolecular protective material contains a water-soluble macromolecular substance having a molecular weight above 2000 D.
- A process as claimed in any of the preceding claims wherein said macromolecular protective material contains macromolecules naturally occurring in the blood of the species from which the blood derives.
- A process as claimed in any of the preceding claims wherein said macromolecular protective material has a haemoglobin content of less that 1% wt relative to the haemoglobin content of erythrocytes.

WO 2004/057962 PCT/GB2003/005670

- 16 -

- 6. A process as claimed in any of the preceding claims wherein the drying step is effected at a temperature between 1 and 10°C.
- 7. A process as claimed in any of the preceding claims wherein the drying step involves fluidized bed drying.
- 8. A dried particulate blood product the particles whereof comprise anuclear blood cells in a macromolecular, protective material.
- 9. A dried, reconstitutable, biological product comprising nucleus-containing eukaryotic cells in a macromolecular protective material.
- 10. A process for the preparation of a dried; reconstitutable biological product which process comprises impregnating a particulate macromolecular protective material with a liquid containing nucleus containing eukaryotic cells and drying the impregnated particulate.
- 11. A method of production of a transfusion liquid, said method comprising dispersing a dried particulate blood product according to claim 8 or claim 9 in a physiologically tolerable sterile aqueous solution and optionally treating the resulting dispersion to reduce the content therein of the protective material.
- 12. A kit comprising a first container containing a dried particulate blood product according to claim 8 or claim 9, and a second container containing a sterile physiologically tolerable aqueous reconstitution solution.

WO 2004/057962 PCT/GB2003/005670

- 17 -

13. A kit as claimed in claim 12 wherein said first container is disposed in said second container and is openable whereby to release its contents into said solution.
